Election/Restrictions

1. Inventions Group 1 and Group 2 are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group 1 has separate utility such as having a comparison of expected receive time with actual arrival time of a packet. In the instant case, invention Group 2 has separate utility such as combined or distributing information by creating an aggregate packet which acknowledges receipt of plurality of packets. See MPEP § 806.05(d).

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24 are, drawn to comparison of expected receive time with actual arrival time of a packet, classified in class 370, subclass 503.
- II. Claims 25-40, drawn to creating an aggregate packet which acknowledges receipt of a plurality of packets, classified in class 370, subclass 394.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
